

# Is your school's technology set up for active learning?

It's never been more important to regularly assess how technology is used in our classrooms, schools, and districts. Use this checklist to reflect on your set up!

## The technology in my classrooms encourage and allow students to:

- Create and synthesize their learning in different ways
- Proactively seek new information (teachers are not the only source of knowledge)
- Solve problems independently or in groups
- Assessments are not just digital quizzes but ways to assess deeper understanding
- Communicate, collaborate, and explore with each other
- Apply knowledge and learning to real-world scenarios
- Have choice in how they access materials
- Provide feedback on their learning in the classroom

## How is your school's technology culture for teachers? Check off these best practices:

- Teachers have professional development in active learning
- Teachers have a way to work together and share practices that promote active learning
- The ideal type of active, engaged technology usage is regularly modeled for teachers
- Technology usage is regularly assessed and analyzed beyond basic reporting requirements
- When using technology, data privacy and security are regularly discussed and critical reflections occur
